# NOTES AND INDEX

## Dimensions

The thickness dimension in the part drawings represents the thickness of the frit disc not the frit ring. Frit rings are often slightly thicker to ensure a proper seal. When tightened into a filter holder the ring compresses to the thickness of the frit disc.

The volume listed for each frit and frit disc is the item's theoretical hold-up volume — the volume of fluid required to fill the pores of the frit. These numbers are obtained by calculating the solid volume of the frit disc and then multiplying by the following factors:

- 18% for 0.2 $\mu$ m frits
- 20% for 0.5 $\mu$ m frits
- 24% for 2 $\mu$ m frits
- 26% for 5 $\mu$ m frits
- 28% for 10 $\mu$ m frits
- 30% for 20 $\mu$ m frits

## To Clean Or Not To Clean?

It is rarely worth the time and effort to clean frits, given the relatively low cost of replacements. Furthermore, cleaning may leave some debris embedded in the frit pores. If the washed frit is accidentally returned to your instrument in a reverse orientation, any remaining debris could be flushed out and deposited further down the fluid path. If this frit is being used as a column head frit, the debris may be washed directly onto the column bed.

## Polyethylene Hydrophilic Frits

Biotech produces a variety of dimensions of Polyethylene Hydrophilic frits primarily intended for SPE (Solid Phase Extraction) applications. Details upon request.

## Special Design

Frits can be modified; rings – no rings, PEEK rings – PCTFE rings etc.

# PORO-FRIT™ FOR PREP CHROMATOGRAPHY.

## TECHNICAL DATA.

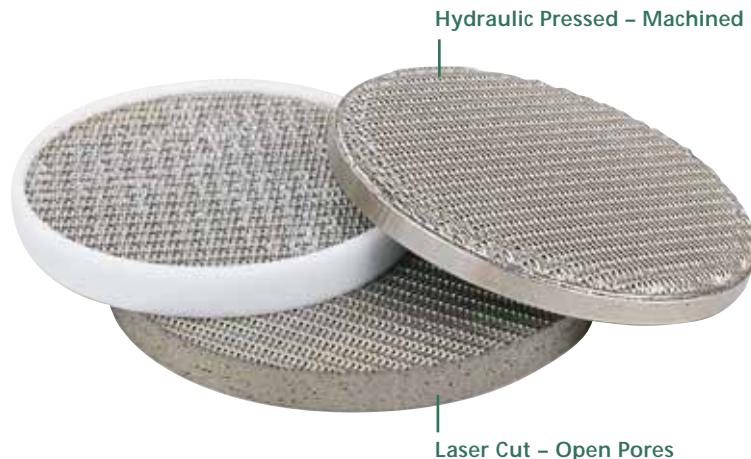

Poro-Frit™ is a woven wire cloth laminate with the different wire cloth layers closely bounded together by a unique sintering process, resulting in a predetermined precise characteristics with regard to pore-size, number of layers, strength, pore distribution and permeability.

Poro-Frit™ has a defined pore size range of 2 microns and upwards and the geometry of the pores is uniform and there are no “blind holes”, which may happen in ordinary sintered frits. The physical

characteristics are very well suited for prep chromatography since the build-up of back-pressure is very low and flow characteristics are excellent.

Presently we do have a capacity to manufacture prep frits in the range from 20 mm up to 1 200 mm without welding.

Depending upon the application most of our frits have 5-10 layers, including a strong support screen, and a thickness of either 1.7 – 3.0 – 5.0 mm.

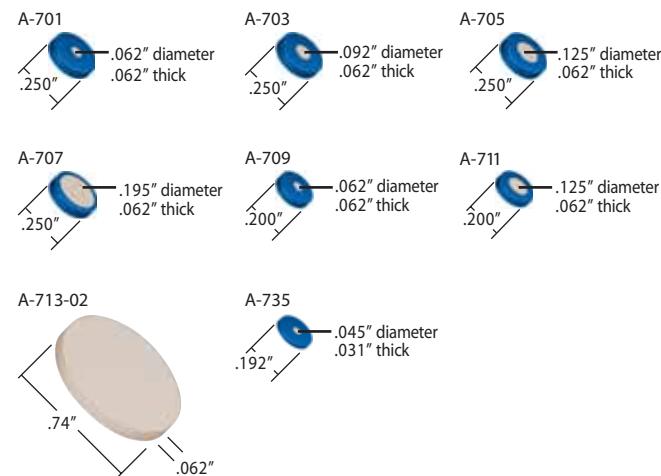

# 100% PEEK™ FRITS

- INERT, BIOCOMPATIBLE AND METAL-FREE
- UNIFORM POROSITY, LONGER FILTRATION LIFE

PEEK™ Frits offer exceptionally uniform porosity – more than any other frit on the market. This property ensures longer filtration life and consistent frit-to-frit swept volumes. The 100% PEEK polymer frit discs are biocompatible and inert to most solvents, making them well-suited for bioanalytical applications. PEEK's robust properties make these products suitable for low and high pressure applications. PEEK frits are also a good choice for many high temperature applications (up to 100°C).

Disc rings, available on most PEEK frits, are made of Kel-F® (PCTFE) and are slightly thicker than the frit disc, providing enhanced sealing and excellent chemical resistance.

# TITANIUM FRITS

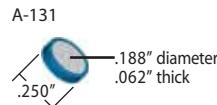

- EXCELLENT ALTERNATIVE TO STAINLESS STEEL

Titanium is a biocompatible alternative to stainless steel. Our 0.2µm, 0.5µm and 2µm porosity titanium frits are surrounded by PEEK™ or Kel-F® (PCTFE) polymer for enhanced sealing.

# STAINLESS STEEL FRITS

Stainless Steel Frits are available in 0.5µm or 2µm porosity – the most common HPLC filtration ratings. Each frit includes a Kel-F® (PCTFE) or PEEK™ polymer sealing ring. Many of the frits shown have the common .250" and .254" ODs, which allow them to be used in the precolumn and inline filters.

Two 0.5µm porosity Stainless Steel Frits are also available. Part numbers 7315-010 and 7335-010 are replacement frits for Rheodyne Column Inlet Filters 7315 and 7335, respectively.

# STAINLESS STEEL SEMI-PREP FRITS

We offer a full line of 316 Stainless Steel Frits for semi-prep applications. Many of these frits come complete with a Kel-F® (PCTFE), Tefzel® (ETFE) or DuPont Teflon® brand resin PTFE sealing ring. Choose from 2µm, 5µm, 10µm and 20µm filtration porosities and a range of diameters to match your intended flow rate and filtration requirements.
