Dr. Patrick Moore's description of his unique thesis as presented in

Fake Invisible Catastrophes and Threats of Doom."It dawned on me one day that most of the scare stories in the media today are based on things that are invisible, like CO2 and radiation, or very remote, like polar bears and coral reefs.

Thus, the average person cannot observe and verify the truth of these claims for themselves.

They must rely on activists, the media, politicians, and scientists - all of whom have a huge financial and/or political interest in the subject - to tell them the truth.

This is my effort, after 50 years as a scientist and environmental activist, to expose the misinformation and outright lies used to scare us and our children about the future of the Earth.

Direct observation is the very basis of science. Without verified observation it is not possible to know the truth. That is the sharp focus of this book."The book contains 98 color photographs, illustrations, and charts. A key target audience is parents who do not approve of the "progressive" school curriculum and its alarmism about the future of civilization and the natural world.

Dr. Moore hopes these parents will read his book and pass it on to their high-school and older children to give them an alternative to the bleak future predicted by the merchants of doom. Many other audiences will also find the book informative and convincing.

In 11 chapters the reader is clearly shown that citizens are being misinformed by so many environmental doomsday prophesies, ones they cannot verify for themselves.

We are told that nuclear energy is very dangerous when the numbers prove it is one of the safest technologies.

We are told polar bears will go extinct soon when their population has been growing steadily for nearly 50 years.

We are told that there is something harmful in genetically modified food crops when it is invisible, has no name and no chemical formula.

We are told severe forest fires are caused by climate change when they are actually caused by poor management of fuel load (dead wood) in the forest.

We are told that all the coral reefs will die by 2100 when in fact the most diverse coral reefs are found in the warmest oceans in the world.

And of course, we are told that invisible CO2 from using fossil fuels, accounting for more than 80 percent of our energy supply, will make the Earth too hot for life.

All of these scare stories, and many more, are simply not true.

And this book will convince you, your family, and your colleagues of that.

There is no substitute for the truth.

Dr. Patrick Moore was one of the cofounders of Greenpeace and sailed on the first Greenpeace campaign against US H-bomb tests in Alaska. Upon receiving his PhD in ecology, he spent 15 years in the top committee of Greenpeace and led many of its environmental campaigns.

Greenpeace began as a group of volunteers with noble intentions.

Over the years it became very successful with campaigns to save the whales, stop the mass slaughter of baby seals, prevent toxic dumping into the air, water and earth, and many more.

Greenpeace found itself in the early 1980s with more than \$100 million coming in annually and close to 1,000 people on the payroll. It had become a business and fundraising moved to the top of the priority list.

New campaigns were more about using sensationalism, misinformation and fear to attract donations.

Dr. Moore said good-bye in 1986 as Greenpeace was turning into a racket peddling junk science.

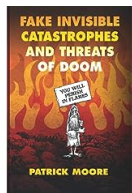

Since then he has strived to be a sensible environmentalist, basing his beliefs on sound science and logical thinking. This book is the culmination of 50 years of learning during Dr. Moore's multi-faceted quest for the truth about environmental issues (an historical account of Dr. Moore's 15 years with Greenpeace and his analysis of environmental subjects are in his previous book, "Confessions of a Greenpeace Dropout

Popular Highlights in this book

What are popular highlights?

The push to “phase out all fossil fuel consumption in thirty years” is certainly the biggest threat to civilization in the world today.

Highlighted by 676 Kindle readers

It is news to most people that we are at the tail-end of a 150-million-year decline of carbon dioxide in the atmosphere, caused primarily by multiple species of shelled-marine organisms consuming millions of billions of tons of CO2 out of the ocean that resulted in the production of rocks.

It is hard to refute the facts that are so well presented in this book. More is covered than just climate change and it should be compulsory reading.

Thought provoking. Easy to understand and well written. Some very valid logic and science to back up his claims. I got the hardback.

Wow, really opened my eyes. Dr Patrick Moore makes a really compelling case.

Reviewed in Australia on 7 June 2023

Verified Purchase

I was a straight down the line type 3 years ago, and would shut my ears to any "conspiracy theory". Sadly it took the Covid debacle to make me question the mainstream and to go looking for facts and data about issues from a fresh perspective. Global warming seems to be just yet another in a long list of "naratives" that survives only because the mainstream cancel any debate or access to alternate ideas for discussion. It's not even close, global warming is just another house of cards built on lies and fearmongering.

A fascinating read

Reviewed in Australia on 21 May 2023

Verified Purchase

This is a fascinating book. The combination of stories, facts and research data gives a compelling case for an earth that is both in good health and improving. It's a pity we don't hear more of this information in the popular media.

An enlightening book!

Reviewed in Australia on 24 February 2023

Verified Purchase

Reading this book has been an enlightening, freeing and infuriating experience. I have always been somewhat sceptical of the scaremongerers rhetoric, however, as a responsible citizen I have sought to minimise my footprint on this earth, just in case.

It now seems that, yet again, we have been lied to and taken for a ride by entities with huge vested financial interests in not telling the truth. As an engineer with strong interests in the complexity of science, it seems that proving hypotheses with sound, peer reviewed evidence, vigorous debate and tolerance of differing opinions is not common practice.

I have lost so much respect for our scientific community, who with few exceptions have bowed to the almighty dollar.

I am delighted that things aren't as bad as we are led to believe, but infuriated that we are continuously treated as imbeciles and dictated too by people who do not walk the talk.

Highly recommended!

Absolutely Eye-Opening!

Reviewed in Australia on 5 October 2022

Verified Purchase

This book is an absolute revelation. There are so many things on which I now realise mainstream media has led me totally astray. If you want "balance" on the environment and global warming, this book provides it in spades. You will either find this book though provoking or blasphemy; there is no middle ground.

Patrick Moore, Ph.D. backs up everything he says in this book with impeccable citations and research links, and the book itself is full of charts, graphs and graphics that explain complex concepts in simple, visual terms.

For me, Fake Invisible Catastrophes and Threats of Doom is a keeper.

Adam Salene

We are being lied to.

Reviewed in Australia on 13 May 2021

Verified Purchase

Patrick Moore is a former Greenpeace activist who wants us to know we are being lied to about environmental catastrophes. They involve invisible substances, like carbon dioxide and radiation, or are remote from most people's direct knowledge, like polar bears and coral reefs. This puts us into the hands of expert interpreters and the media for our knowledge of them. Pulling no punches, he accuses high-profile people and institutions of "knowingly lying through their teeth."

Moore's forensic analysis of eco-catastrophic claims provides a worthwhile exposure to a range of scientific topics, from atmospheric physics and the buffering properties of sea water, to radiation, the climate history the planet, and how organisms work. He makes a good case that we are being lied to about fake, invisible catastrophes and offers plausible explanations of why: activists seeking donations, the media seeking readers, politicians seeking votes, and scientists seeking never-ending grants.

A SUMMARY OF MOORE'S VIEWS, DOWNPLAYING 'CLIMATE CHANGE' EFFECTS, ETC.

Reviewed in the United States on 6 November 2021

Verified Purchase

Patrick Albert Moore (born 1947) is a Canadian industry consultant, former activist and member of Greenpeace; he left Greenpeace in 1986.

It is certainly true that environmental activists have sometimes overstated/exaggerated the immediate danger of environmental conditions (probably to try to motivate politicians and the public to action; predicting extreme danger within 10-20 years is much more 'motivating' than danger within 50-100 years). Moore's book offers some helpful correctives to some such claims. But we must analyze his arguments carefully, and note that he has long since abandoned Greenpeace-style positions, in favor of arguments favorable to his financial supporters. Anyway, on to the book itself.

He wrote in the Introduction to this 2021 book, "Upon completing my Bachelor of Science with Honors, I enrolled in a PhD program in Ecology and never looked back. I became a born-again ecologist... In early 1971, in the midst of my PhD program... I joined a small group called the Don't

On comprend l'hystérie des médias, mensonges et propagande

Reviewed in France on 8 August 2023

Verified Purchase

Ce livre démontre l'hystérie des médias et la corruption de nos institutions, nos scientifiques et nos gouvernements, qui sont achetés par les corporations. Ceux qui ne sont pas d'accord sont virés. Voilà l'état de la "Science" aujourd'hui. Par contre, le chapitre sur les OGM est pathétique. La terre a beaucoup de problèmes causés par les êtres humains, mais le CO2 n'en fait pas partie.

hausers1343

Easy to read and insightful

Reviewed in the United States on 29 August 2023

Verified Purchase

This was a good read with many compelling arguments for the benefits of co2 and a twist on the narrative that human emissions of co2 is bad. It instead explains that we inadvertently reversed the decline of co2 and restored a balance that may have ended most life on earth had we not come along in this world.

I recommend this book even if your mind is made up or if you are looking for an alternative positive angle on all these doom and gloom scenarios.
