Redefine the 3D print

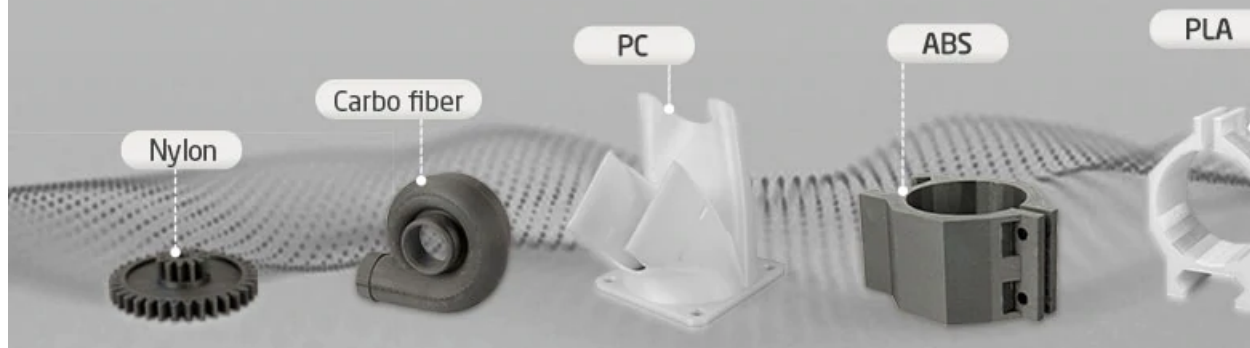

# Redefine the 3D pri

## SIX KINDS OF INNOVATIVE TECHNO

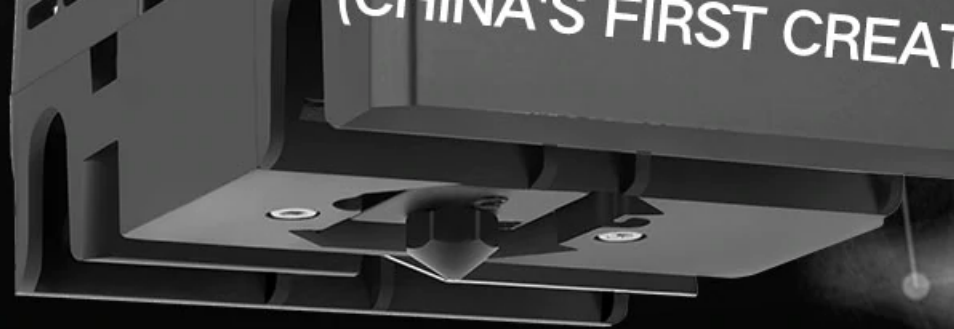

X-max is the first large print size industrial-grade 3D printer in China that has the ability to print Nylon, Carbon fiber, PC, PLA, TPU, ABS.

②

**Two Sets Of QIDI Third Generation  
Assembly With Different Capability**

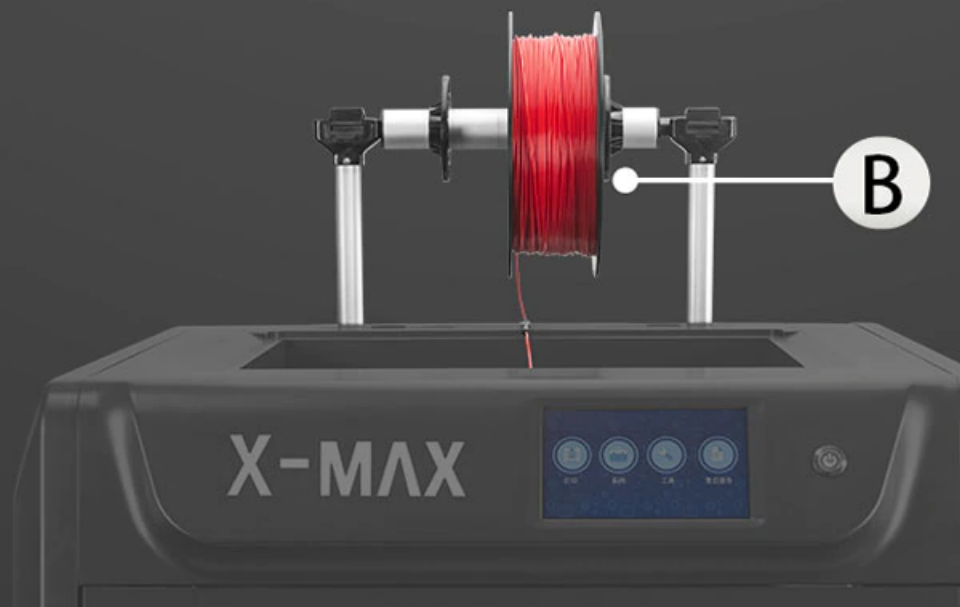

- **A extruder :** For printing general material such as P (already installed on the printer).
- **B extruder :** For printing advanced material such as Fiber,PC(as the spare extruder in the box).

3

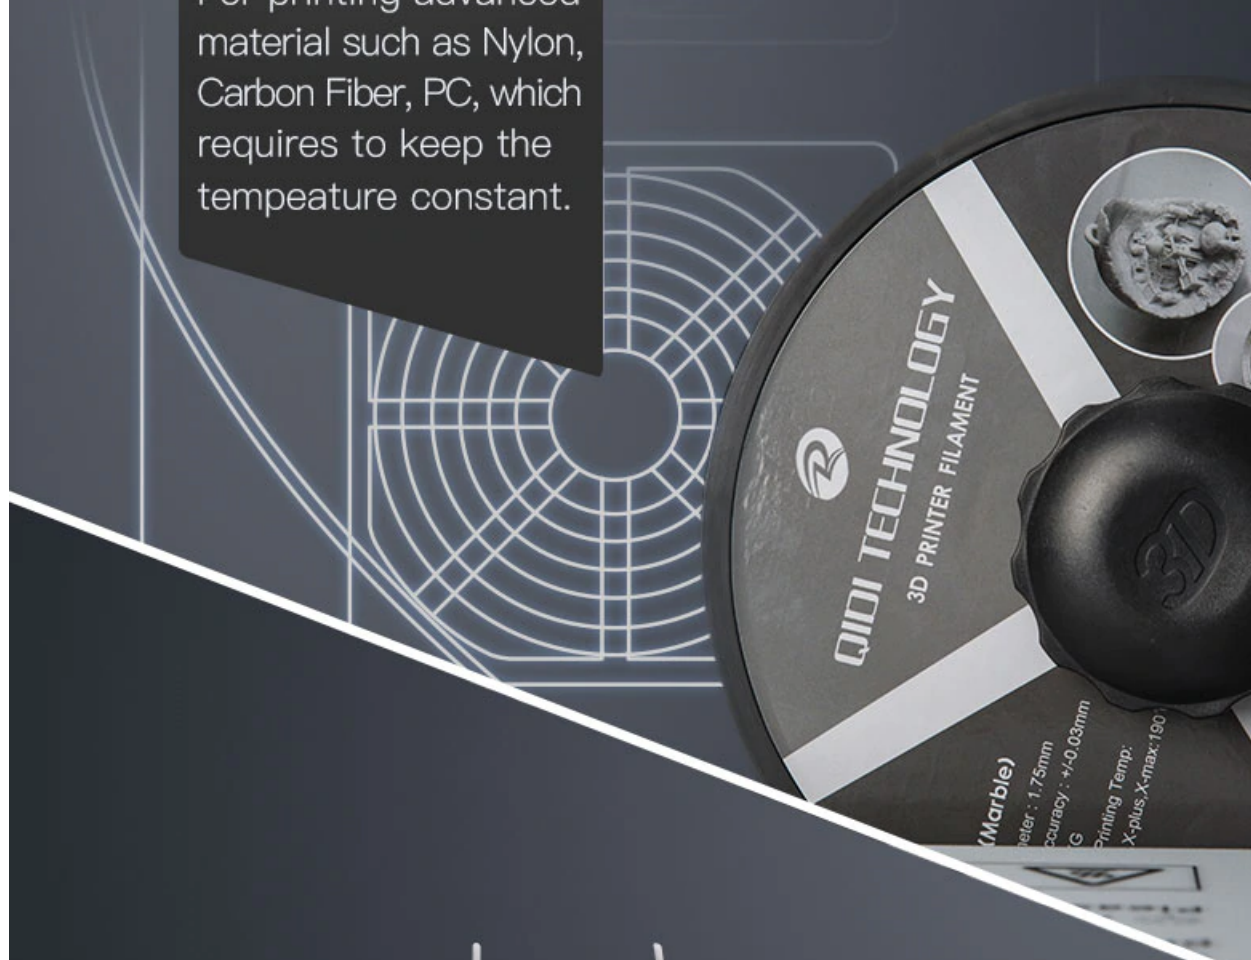

## The First Creation of the Two Different Ways for Place the Filament

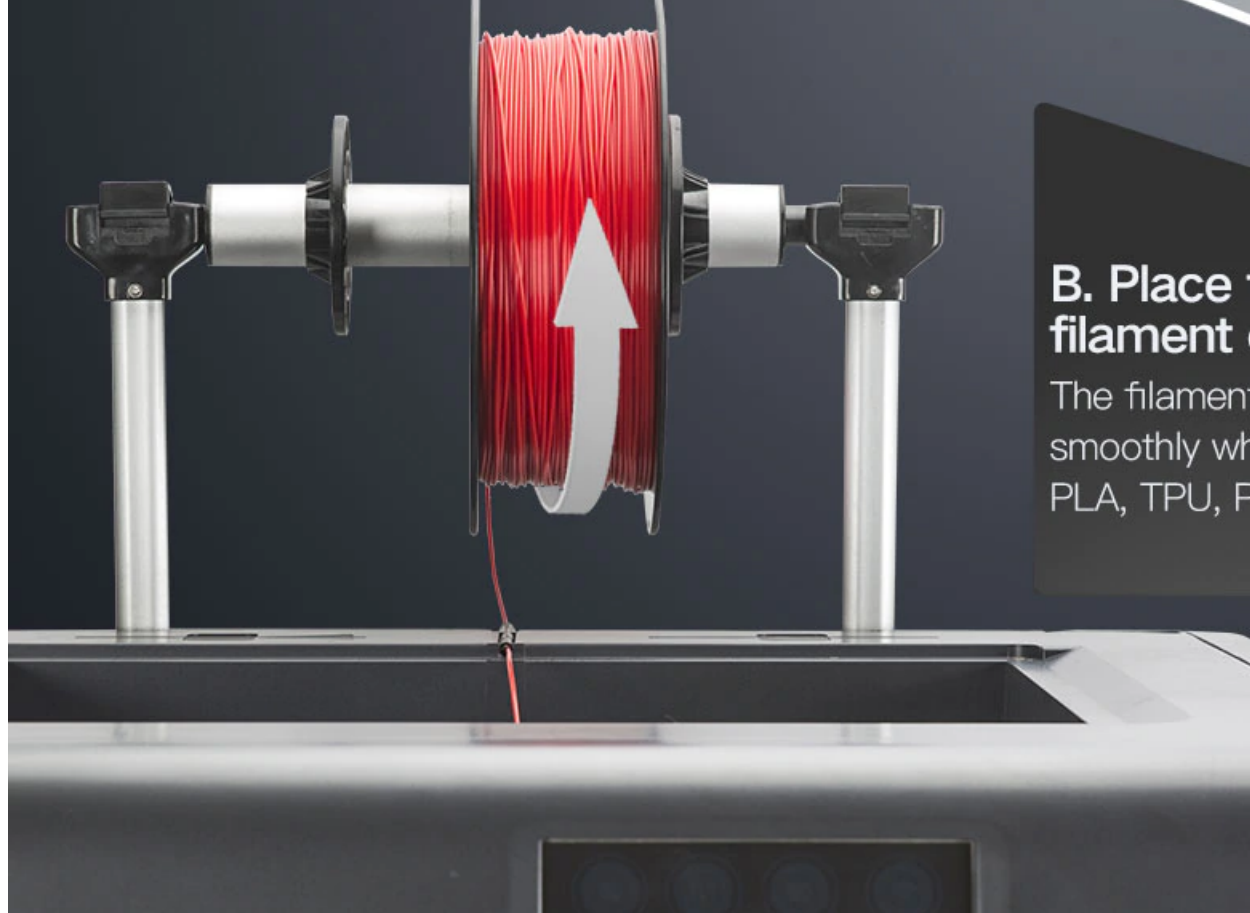

## A. Place the filament inside

For printing advanced material such as Nylon, Carbon Fiber, PC, which requires to keep the temperature constant.

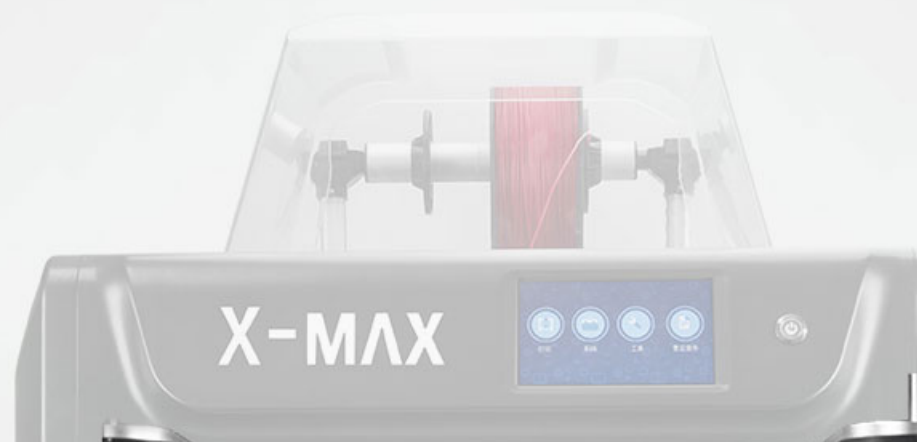

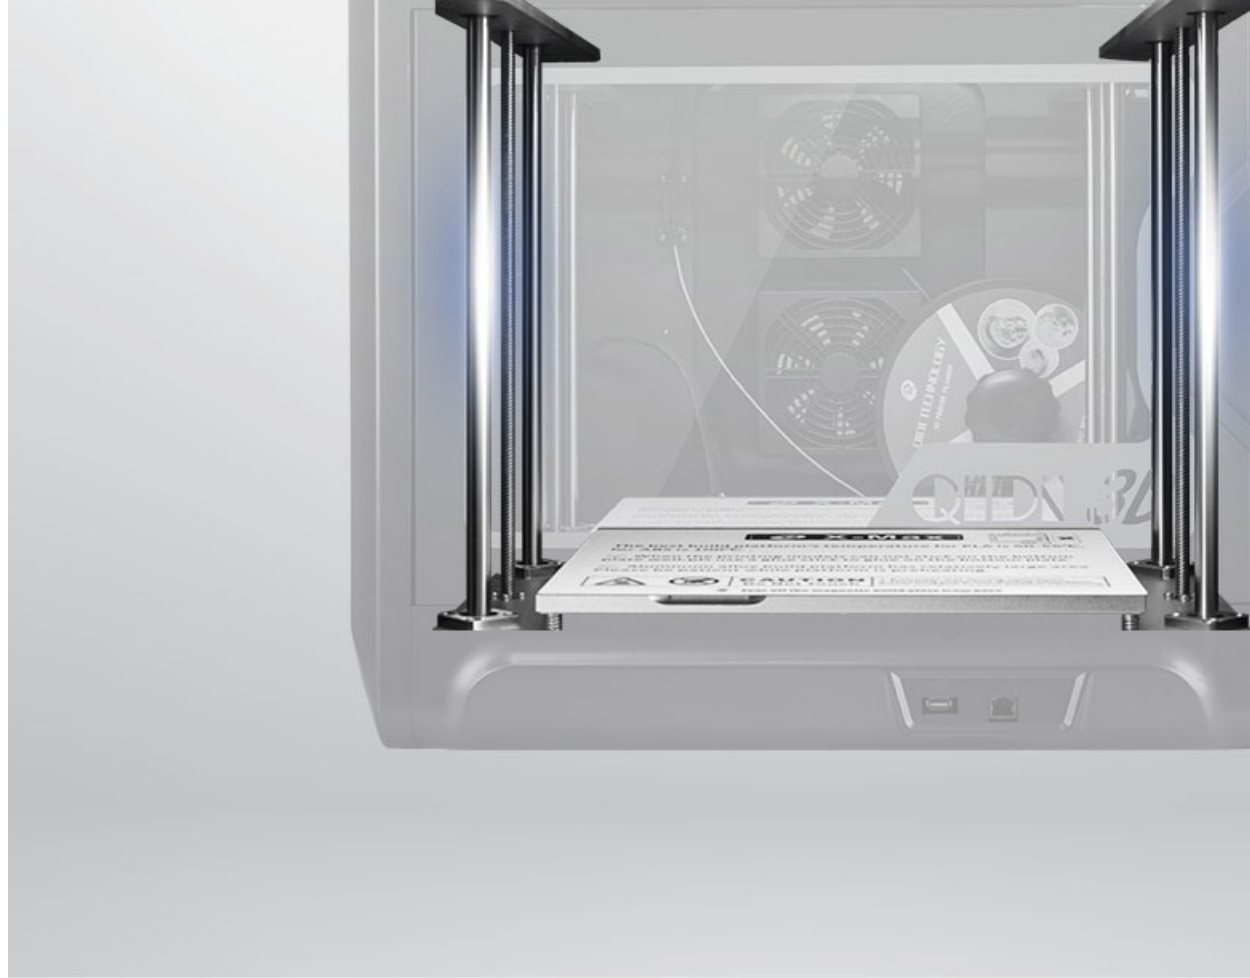

## B. Place filament

The filament is loaded smoothly when using PLA, TPU, F

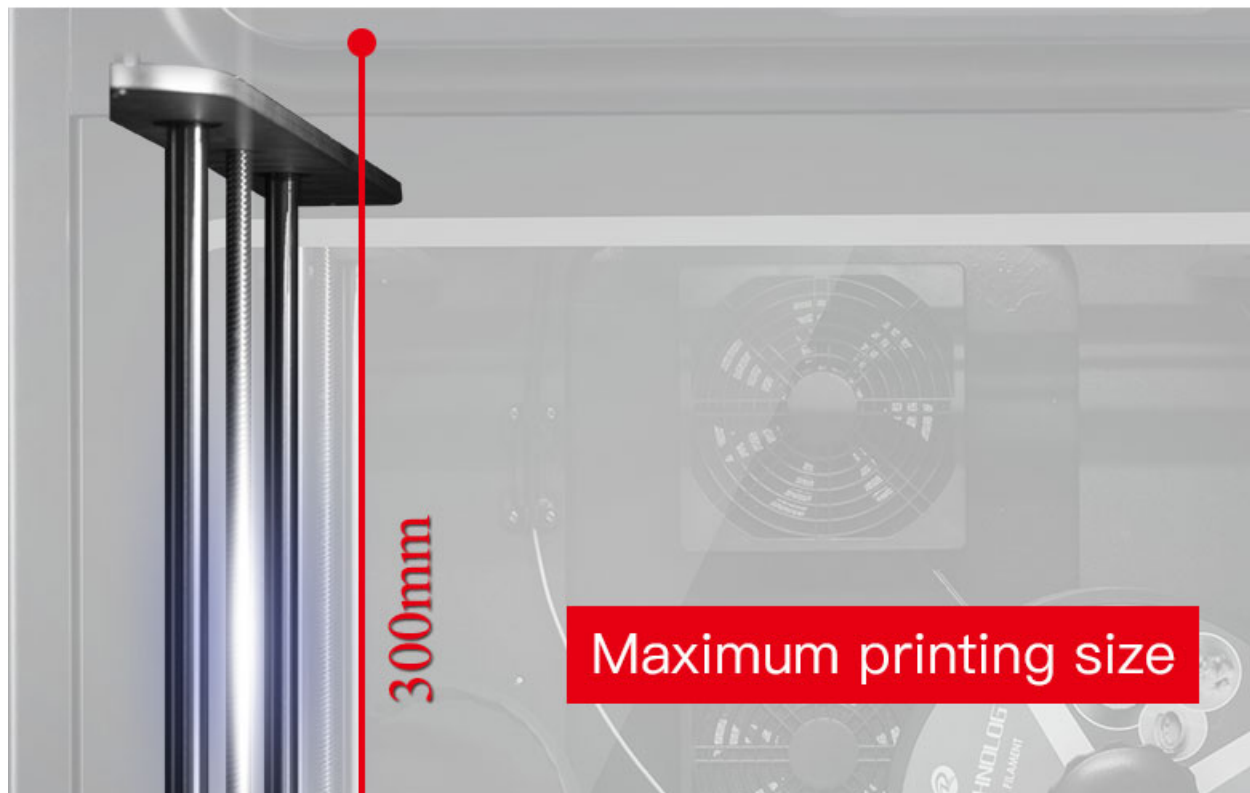

4

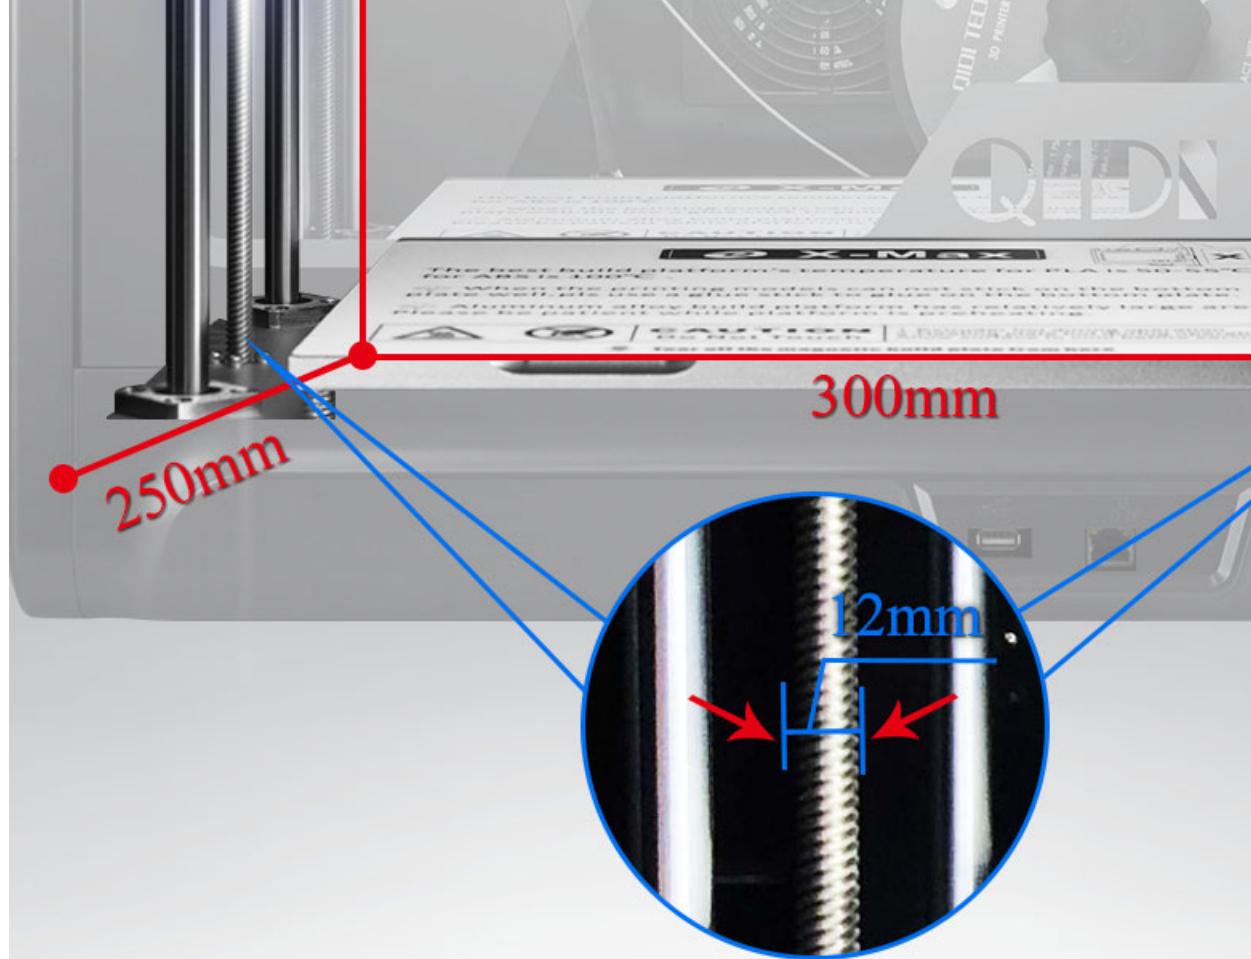

## Double Z-axis Build Bed Structure

Updated the Single Z-axis to **Double**  
more Stable and Solid for Large Size Print

5

Magnetic, removable, bendable  
sticker pioneered by QID

**Magnetic platform sticker,  
easily take off from the build bed.**

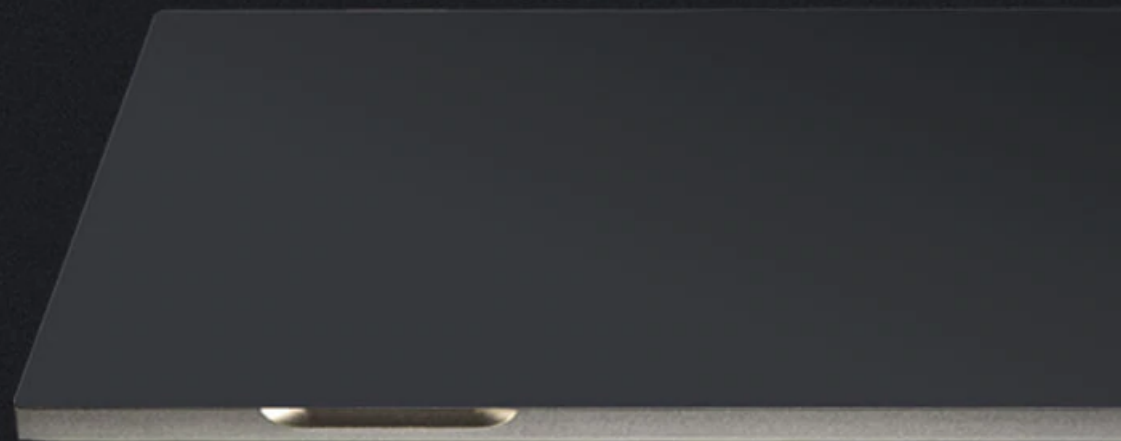

**Bendable platform sticker,  
model can be easily taken off from the st**

# The first AB side design in China double side printing

**A side:** We can use the obverse side to print general filament such as ABS, PLA, TPU.

**B side:** We can use the reverse side to print advanced filament such as Nylon, PC, Carbo fiber, just as hard like a glass.

**Good Printer**

I have lots of experience with 3D printers and I have to say this printer so far has been great. I have printed a variety of materials and heavy and rigid which does help dampen some of the sounds. Having two extruders as well as a bunch of spare included parts make it. The touch screen is very nice, and the features it offers such as being able to jog the machine around is much better than other printers. It also includes a profile for other slicers as well.

However, there are some issues I have with the printer. The first one is the main extruder tends to clog, a lot. It usually clogs when printing. My second complaint is the visibility in the machine is limited at best, especially when the build plate is laying the first layer down. You can't see through, but if you have the printer on a semi-tall desk it makes it difficult to look in from the top. Furthermore, for an enclosed printer there is no window through, however I have yet to have a print warp due to enclosure heat loss.

Overall, if you are looking for a 3D printer with a large build volume for a good price this is an extremely good option and will provide a lot of value.

Note, if ordering with Paypal you WILL be charged an "international transaction fee" that is a certain percentage of the product cost.

**Amazing QIDI 3D Printer**

This is the first 3D printer I have ever purchased. I had been looking at various models from different manufacturers for about 2 months and significantly larger print volume. With an almost 11x10x11 print area, I can print almost anything I want. What is more useful than a large print volume, such, the ability to easily print 20 copies of the same item at the same time is very handy and time efficient.

There are several features that I had not anticipated needing but am grateful that they were included with this model. I am able to upload files stored on a USB drive (16GB stick is included) prior to printing. I can also copy the GCode file directly onto the USB drive from my computer. This frees up my computer to do more image creations while the printer is busily printing the current print job. The printer comes with a large window in removing the printed object. I just swap the two sheets and remove the printed objects when I have time.

The good news is that it does not slow me down when I have several things to print on multiple sheets. In fact, I already purchased 2 more and the process faster.

Jojo

**Highly recommend**

I have purchased this printer and I'm very happy with it overall.

The delivery was fast enough considering the current situation in the world. The printer comes pretty much ready to go and the instructions are within minutes. Physically it looks very sleek too.

The support team are very prompt and usually reply within less than 24 hours and they have been very helpful with everything I need.

There are some upgrades that might be necessary to be done in the printer in order to get an optimal print and avoid ruined prints, but overall it's a great printing experience.

I also would like to see more information online about the printer as there is very few tutorials and information. I have encountered some issues that could easily be avoided if there was more information, videos, tutorial,... online and provided by the seller.

I'm still testing the printer, its functionality and performance, but as I mentioned above I'm very happy with the product overall and I would recommend it.

★★★★★

GREAT

A Color touch screen that shows a rendering of your model so you know you copied and chose it correctly

The magnetic print surface works well and it is very easy to get my prints off by bending the sheet

The dual-shaft design for the Z axis works very smoothly, and all of the steppers seem to be very nice quality and are smooth and quiet

The spool holder can hold up to three rolls of filament at once, though it may only be practical to put two on there so they can easily be changed

The print surface on the Max is huge. I wear a size 12 shoe and, if I print it diagonally, I can print the whole sole. Or you can print a life size Halloween this year. The Max itself is huge too though -- about 2 feet on each side, with another 8 inches on top for the dome.

The software (Qidi Print) has a cool feature where, after you assemble your tray and hit go, it checks for a removable memory stick and a button clicks right in Qidi. Other than that it's ok, with a decent UI.

★★★★★

Very good printer

I bought this printer January 2020, and I'm very happy about it for the moment.

LCD display is comfortable, it's very nice to see pictures of files present on your Usb Key.

The Magnetic Build Plate is very useful to remove easily big printed content.

Bed is very stable, I adjust it only once, no need to touch unless you switch to the high temp extruder. The volume of print is very good

The USB interface present is only to retrieve gcode from Usb Key, but with simple FT232RL FTDI (about 5 euro) you can use this printer with PC

I was able to print really small figurine 30mm high with layers of 0.05mm

Customer Support is beautiful, I had issue with my extruder that was always clogged and they provide me quickly the new version of the printer

A simple tips that I can provide is to keep the door open and to remove the top cover while printing PLA to avoid to hot temperature
