Innovators of High Resolution Chromatography

# Rtx-5MS The True LOW BLEED LEADER!

Every column manufacturer claims to have the lowest bleed capillary column for use with GC/MS. Restek decided to conduct a side-by-side test of several commercially available "MS" columns for bleed, response and performance. Our testing indicates that the Rtx@-5MS is the ideal column for GC/MS applications requiring high sensitivity.

#### **Bleed**

The Rtx@-SMS was compared to two other "MS" columns in an HP 5890 Series II GC with an HP 597 1 Mass Selective Detector. Each column was tested under identical conditions with respect to both GC and MSD param-

eters (e.g. linear velocity, temperatures, tuning, etc.). Figure 1 shows the plot of mass 207, the most characteristic bleed ion of a polysiloxane stationary phase. The Rtx@-5MS column exhibits lower bleed at both 325°C

and 360°C compared to the other two "MS" columns.

# How important is having a column with low bleed?

Column bleed can ultimately effect sensitivity, spectral quality, and source contamiation. When a column exhibits high bleed, the signal-to-noise (s/n) ratio is reduced. A low s/n ratio results in poor sensitivity and can decrease the quality of analyte spectra. A decrease in spectral quality complicates the interpretation of mass spectra that makes accurate compound identification difficult or impossible. Reduced column bleed is critical for ion trap mass

#### he Rtx"-5MS - True LOW BLEED LEADER!

TABLE I: Rtx"-5MS demonstrates better response

spectrometers. The automatic gain control feature of these instruments will significantly reduce sensitivity as column bleed increases during temperature programming. Using low bleed Rtx"-5MS columns will result in increased sensitivity of ion trap GC/MS systems. If a column continues to contribute high bleed, it may result in source contamination. A contaminated source should be cleaned, which may take up to a full day, resulting in lost manpower and valuable

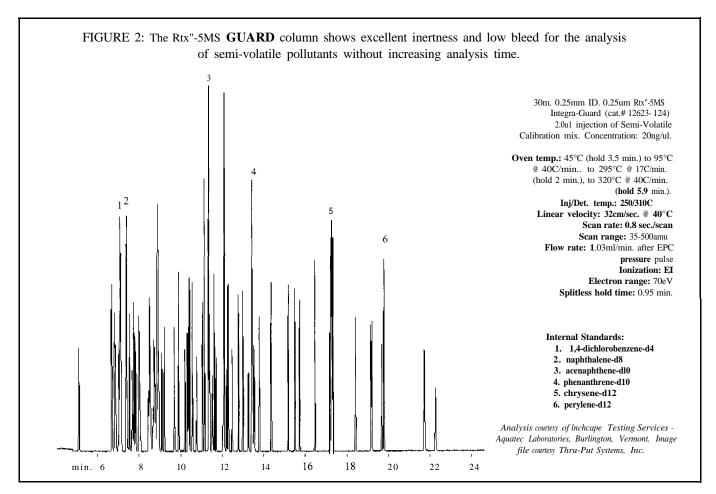

Tibel I in this demonstrates setter response					
of active environmental compounds.					
Components	Rtx"-5MS	DB-5MS	HP-5MS		
n-nitroso-di-n-propylamine	0.30	0.28	0.25		
2,4-dinitrophenol	0.62	0.53	0.52		
4-nitrophenol	0.83	0.82	0.76		
4-nitroaniline	0.93	0.69	0.80		
pentachlorophenol	1.38	1.30	1.34		

instrument time. Because each Rtx"-5MS column is thoroughly tested for low bleed, it is the column of choice for the prevention of these problems.

#### **Inertness**

Low bleed levels are important, but inertness is also a critical factor when choosing a capillary column for GC/MS analysis. How do active environmental compounds

respond on the Rtx@-SMS compared to other "MS" columns? A 14 component test mixture containing five highly active compounds was injected onto each of the three "MS" columns. The results of

Trestel Corporation

five replicate analyses on each column is shown in Table I. The average response for each of these difficult compounds is higher on the Rtx@-5MS than on either of the competitive columns.

When performing EPA Semi-volatile analyses, the Rtx@-5MS column will exceed the QA performance criteria for inertness and offer considerably low bleed. An example chromatogram is shown in Figure 2.

#### Column Lifetime

The "MS" column you choose not only must have low bleed and excellent inertness, but it also needs to last. Only Restek offers Integra-Guard" technology for your mass spec columns. Integra-Guard" columns have built-in protection without any connectors that can leak and cause loss in sensitivity and possible damage to the mass spec. The built-in guard column prevents sample contaminants from reaching the coated portion of the column. For more information on Restek's Integra-Guard" columns, please call Technical Service at 800-356 1688. ext. 4.

#### Get the Facts

Are low bleed, excellent inertness, and long column lifetime too much to ask for in one capillary column? No! The Rtx@-5MS offers you the most column for your money.

Cat.# 31051, each Cat.# 31151, w/ data pk.

Restek has offered low bleed GC/MS columns since 1991. The Rtx@-5MS continues this tradition and gives the best overall performance for bleed, response, and resolution when compared to competitive offerings. Rtx@-5MS bleed and response factor specifications have been established to ensure that every column exceeds the requirements of the EPA Semi-volatile Pollutants Methods 625 and 8270.

Are low bleed, excellent inertness, and long column lifetime too much to ask for in one capillary columns

No! The Rtx@-5 offers you the most column for you money.
