

Detailed Hydrocarbon Analysis

Featuring Rtx®-1 PONA Columns

- Compatible with hydrogen, for **50% faster run times**.
- Improved resolution between oxygenates and hydrocarbons, for more accurate reporting.
- Individually tested to meet DHA method criteria; guaranteed column-to-column reproducibility.

**BEST COLUMN
AVAILABLE**

Detailed Hydrocarbon Analysis

Featuring Rtx®-1PONA Capillary GC Columns

- Columns meet or exceed all ASTM D6730-01 and Canadian General Standards Board method guidelines.
- Excellent responses and peak symmetry for polar oxygenates.
- Guaranteed column-to-column reproducibility for retention, efficiency, selectivity, peak skewness, resolution, and low bleed.

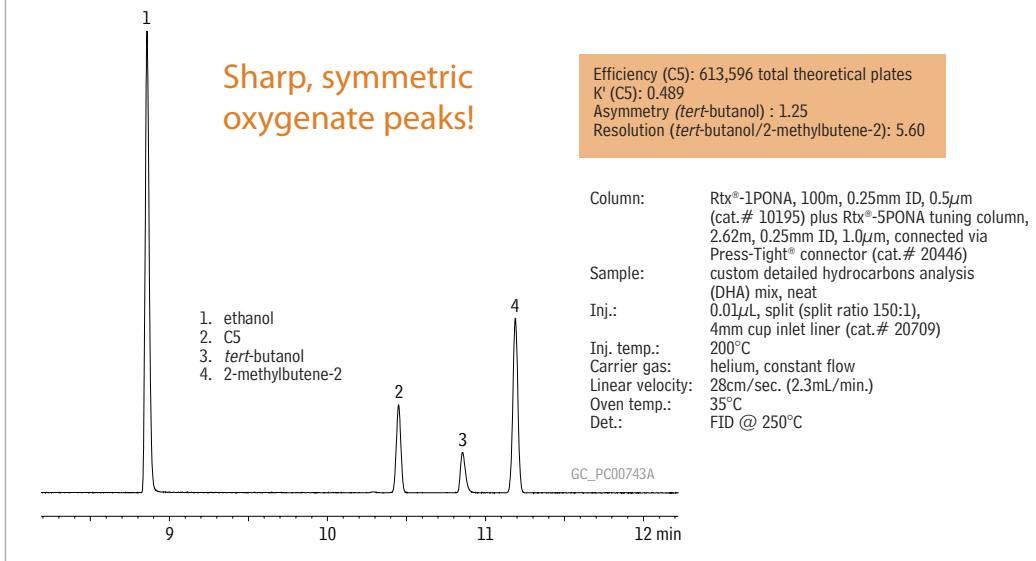

Gasolines are complex mixtures of hundreds of compounds. Information about concentrations of the individual components is important for evaluating raw materials and for controlling refinery processes. A high-resolution GC method for detailed hydrocarbon analysis (DHA) of gasolines is outlined in American Society of Testing and Materials (ASTM) Method D6730-01—often referred to as the PONA (paraffins, olefins, naphthenes, aromatics) or PIANO (paraffins, isoparaffins, aromatics, naphthenes, olefins) analysis. ASTM D6730-01 is specific for the analysis of these hydrocarbon components, plus oxygenated additives such as methanol, ethanol, *tert*-butanol, methyl *tert*-butyl ether (MTBE), and *tert*-amyl methyl ether (TAME) in spark-ignition engine fuels.

To maximize resolution of these complex mixtures, the ASTM method recommends a 100m x 0.25mm ID capillary column coated with 0.5 μ m of 100% dimethyl polysiloxane stationary phase and sets minimum resolution criteria for several critical pairs of closely eluting compounds. To retain the aromatics, and accomplish the separations, a short tuning column, approximately 2-3m long, coated with 5% diphenyl/95% dimethyl polysiloxane polymer, is connected to the inlet of the 100m analytical column. Through a series of trial analyses, the length of the tuning column is adjusted to ensure the critical resolutions are achieved. Rtx®-1PONA columns are ideal for DHA methods and easily meet or exceed performance requirements.

Quality & Consistency

Analytical columns used for DHA applications must exhibit high efficiency and exceptional inertness, especially for polar oxygenates in gasoline. Figure 1 illustrates a column efficiency of 613,596 total theoretical plates, measured on C5, and shows excellent peak symmetry for the oxygenated additives, including ethanol and *tert*-butanol (*tert*-butanol skewness = 1.25). We test every Rtx®-1PONA column for retention (k), efficiency (n), stationary phase selectivity (RI), and bleed, guaranteeing reproducible column-to-column performance.

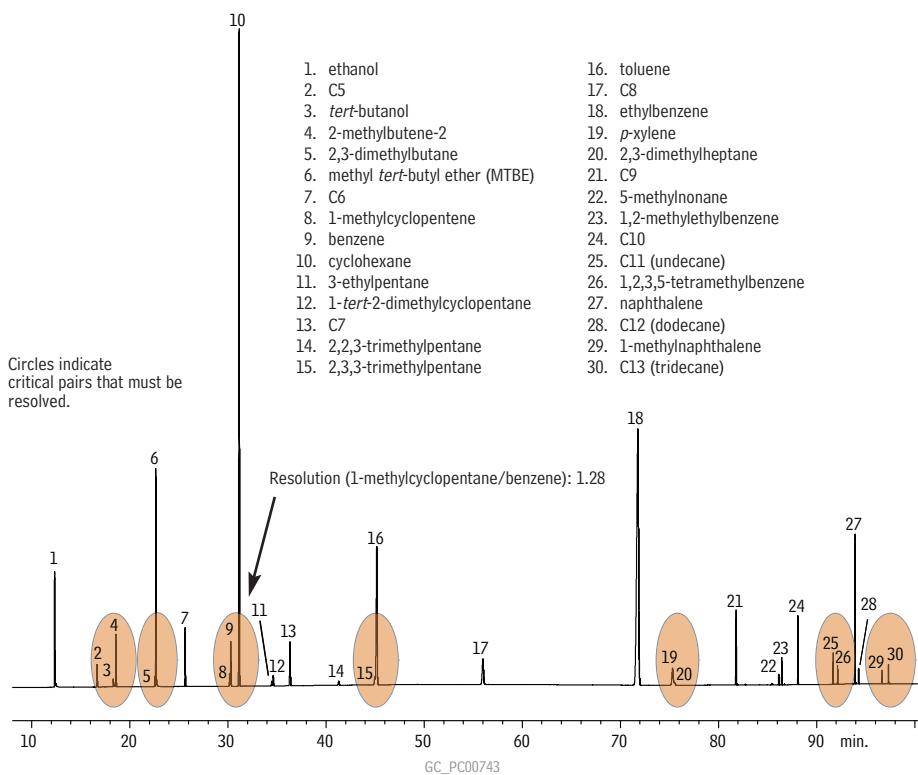

Figure 1 Rtx®-1PONA columns meet or exceed ASTM D6730 specifications.

Resolution of Critical Pairs

There are a number of critical compound pairs that must be resolved as measured by an oxy set-up blend mix. An Rtx®-1PONA column meets all ASTM D6730-01 requirements for critical pair resolution, as demonstrated in Figure 2. A 2.6m tuning column was used to achieve the highlighted resolutions based on retention of the aromatics (e.g., resolution for 1-methylcyclopentene/benzene = 1.28). In addition to qualifying for the ASTM D6730-01 analysis, Rtx®-1PONA columns meet the similarly stringent requirements of Canadian General Standards Board (CGSB) methodology.

Figure 2 Critical pairs of gasoline components resolved per ASTM specifications, using an Rtx®-1PONA column.

Column: Rtx®-1PONA, 100m, 0.25mm ID, 0.5 μ m (cat.# 10195) w/ Rtx®-5 tuning column,
 2.62m, 0.25mm ID, 1.0 μ m, connected via Press-Tight®
 connector (cat.# 20446)
 Sample: custom detailed hydrocarbons analysis (DHA) mix, neat
 Inj.: 0.014 μ L, split (split ratio 150:1), 4mm cup inlet liner (cat.# 20709)
 Inj. temp.: 200°C
 Carrier gas: helium, constant flow
 Linear velocity: 28cm/sec. (2.3mL/min.)
 Oven temp.: 5°C (hold 15 min.) to 50°C @ 5°C/min. (hold 50 min.) to 200°C @ 8°C/min. (hold 10 min.)
 Det.: FID @ 250°C
 Cooling gas.: liquid nitrogen

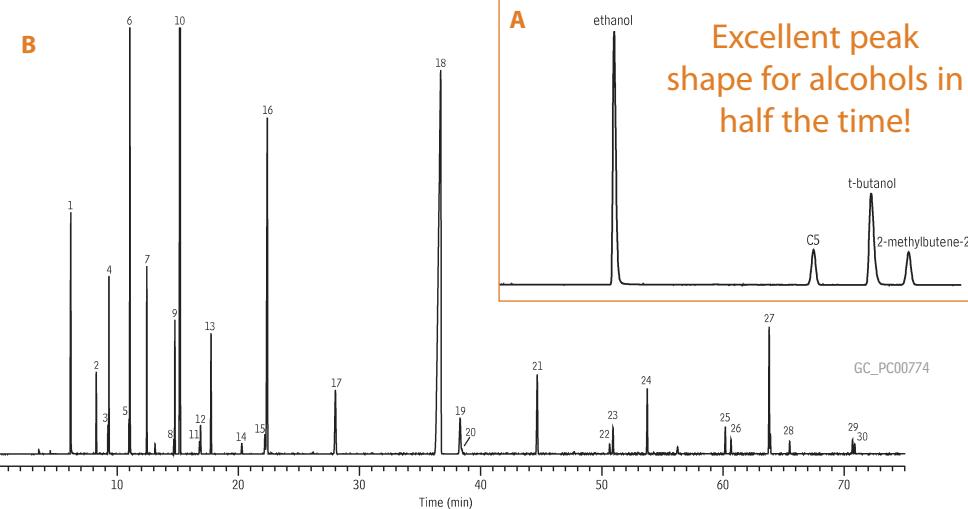

Speed Up Analysis Time Using Hydrogen

Rtx®-1PONA columns easily meet all ASTM and CGSB method requirements when using helium as the carrier gas. However analysis times can be improved significantly—with no loss in chromatographic performance—by switching to hydrogen as the carrier gas. Rtx®-1PONA columns meet or exceed all criteria in these standardized methods in up to 50% less time when using hydrogen (Figure 3).

Figure 3 Achieve up to 50% faster analysis times using hydrogen instead of helium.

	Optimized D6730 with hydrogen*	Optimized D6730 with helium*	Standard D6730 conditions
Approximate analysis time	72 min.	98 min.	146 min.
% Time savings (relative to standard method conditions)	51% faster	33% faster	—

Best Column Available

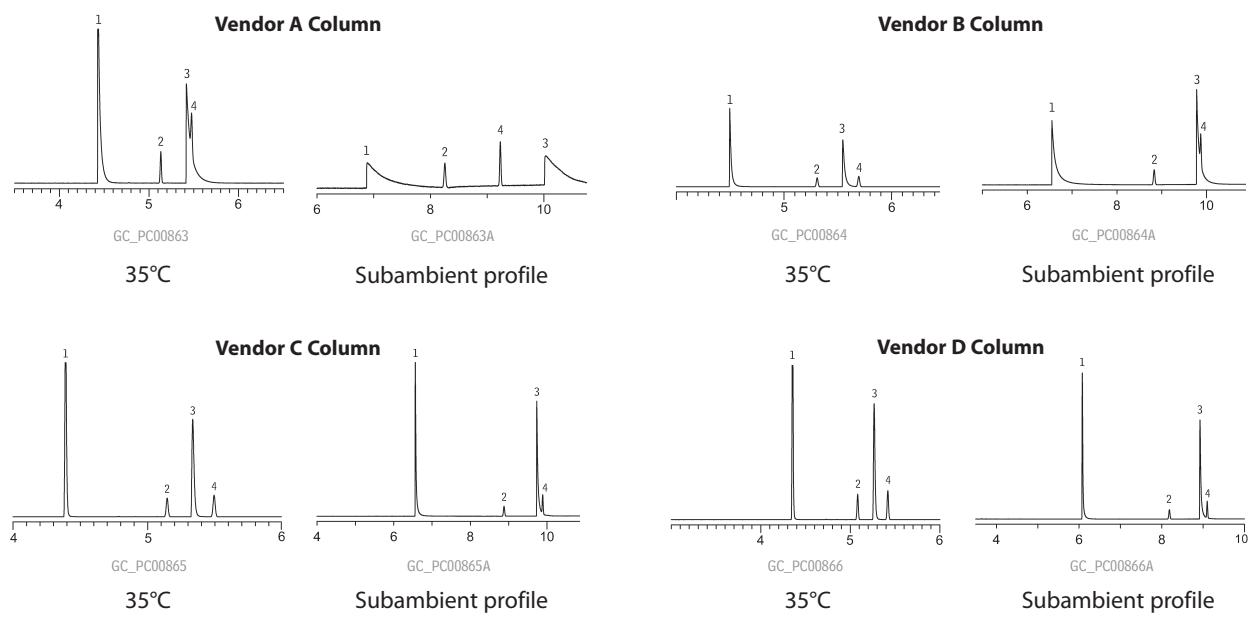

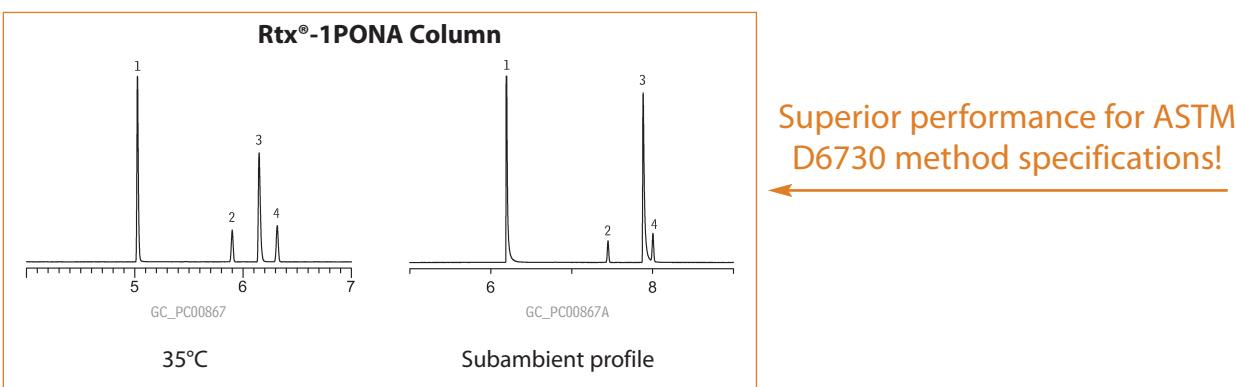

A comparison of PONA columns offered by other manufacturers shows that the Rtx®-1PONA column is the best overall column for peak shape, theoretical plates, and required resolution. Figure 4 shows that, at 35°C, the Vendor A and Vendor B PONA columns did not meet ASTM D6730 method specifications. The Vendor C and Vendor D PONA columns performed within specifications, but column efficiency was less than ideal. In contrast, the performance of the Rtx®-1PONA column at 35°C was well within ASTM D6730 method specifications, and column efficiency exceeded the specification. The column also performed well at subambient temperature using hydrogen as the carrier gas.

Figure 4 Rtx®-1PONA columns outperform competitor columns for detailed hydrocarbon analysis.

	ASTM D6730 guidelines	Rtx-1 PONA	Vendor A	Vendor B	Vendor C	Vendor D
Efficiency (C5)*	400,000–550,000 plates	551,294	522,974	466,089	489,991	483,449
K' (C5)	0.45–0.50	0.48	0.46	0.51**	0.47	0.46
Asymmetry (<i>t</i> -butanol)	>1.00–<5.00	1.31	>5.00**	3.6	1.71	1.59

4. 2-methylbutene-2

Conclusion

Rtx®-1PONA columns offer the best overall value and performance for detailed hydrocarbon analysis. These columns meet or exceed all ASTM D6730-01 and Canadian General Standards Board method requirements and outperform other commercially available columns. Make your next PONA column an Rtx®-1PONA column—individually tested to meet DHA method criteria, assuring outstanding performance and column-to-column reproducibility.

Product Listing

Rtx®-1PONA (nonpolar phase; Crossbond® 100% dimethyl polysiloxane)

- Application-specific columns meet ASTM and CGSB requirements for detailed hydrocarbon analysis.
- Stable to 340°C.

similar phases

Petrocol DH, DB-Petro,

HP-PONA

The Rtx®-1PONA polymer was designed to offer the exact polarity necessary to resolve hydrocarbons in the specific order requested by petrochemical companies. In order to meet the demanding resolution and retention criteria of the American Society for Testing and Materials (ASTM) and the Canadian General Standards Board (CGSB), Restek has developed unique quality control tests and specifications for the Rtx®-1PONA column. The measured values for retention (k), efficiency (n), and stationary phase selectivity (RI) are controlled so that each column exceeds the requirements of the ASTM and CGSB methods.

Universal Press-Tight® Connectors

- Connect a guard column to an analytical column.
- Angle approximates the curvature of a capillary column, reduces strain on column-end connections (Universal Angled Press-Tight® connectors only).
- Repair a broken column.
- Deactivated Press-Tight® connectors assure better recovery of polar and nonpolar compounds.
- Siltek® treated connectors are ideal for low-level analyses and active compounds.
- Fit column ODs from 0.33–0.74mm (Restek 0.1mm–0.53mm ID).

Description	5-pk.	25-pk.	100-pk.
Deactivated, Universal Press-Tight® Connectors	20429	20430	20431
Siltek® Treated Universal Press-Tight® Connectors	20480	20449	20481

Vu2 Union™ Connectors

- Connect a guard column to an analytical column, a column to a transfer line, two columns in series, or repair a broken column.
- Combines the simplicity of a Press-Tight® union with the strength of a metal union.
- Will not unexpectedly disconnect, even at temperatures as high as 360°C.

NOTE: This product is not recommended for GC column-to-MS connections—use the Vacuum Vu-Union. Visit www.restek.com.

Kits include: Vu2 Union™ body, 2 knurled nuts, 2 Press-Tight® unions, and 4 ferrules

Description	Ferrules Fit Column ID	qty.	cat.#
Vu2 Union Connector Kit	0.10/0.15mm	kit	22220
